

• DESIGN RATIONALE REPORT • 2025

Engineering a premium digital presence.

A complete redesign of navkisce.com — from a single, content-heavy page into a modern, multi-page, mobile-first experience built around the student journey.

**Full Website
Redesign**

STACK

**Next.js · Tailwind ·
Framer Motion**

From cluttered pages to a guided journey.

Navkis College of Engineering, Hassan is a state-of-the-art technical institution with a 16-year legacy, eight academic programs and a 12-acre green campus. Yet its existing website did not reflect that calibre. Pages were dense with text, hard to navigate on mobile, and structured as single long scrolls rather than purposeful, dedicated pages. Calls-to-action were buried, departments were hard to compare, and the design felt dated next to peer institutions.

This redesign rebuilds the entire experience from the ground up. We preserved the institution's **brand colours** (deep navy, brand blue and amber), but elevated the typography, layout system and motion design to a premium standard. We split the original single-page dump into **seven purposeful pages** with their own dedicated sub-pages — Home, About, Academics, Admissions, Campus Life, Placements and Contact — each with clear CTAs, easy navigation and a marketing-first content hierarchy. The result is a website that finally matches the quality of the institution it represents.

ORIGINAL SITE ANALYSIS

What was holding the site back.

We crawled every page of navkisce.com — 67 pages in total — and audited the experience across content, navigation, design and performance. Five issues stood out clearly.

01 One long page for everything

Departments, facilities, placements, admissions and gallery content were all crammed onto the homepage with no clear separation. Users had to scroll endlessly to find specific information.

02 Outdated visual design

The template-style layout with default Bootstrap menus, flat hero sections and dated typography made the institution look older and less premium than it actually is.

03 Weak calls-to-action

Admission CTAs were buried, "Apply Now" links were inconsistent, and there was no clear conversion path for prospective students or their parents.

04 Heavy text, few images

Pages were dominated by long paragraphs of text. Visual content — campus photos, lab images, student moments — was underused despite being available.

05 Poor mobile experience

The site technically worked on mobile but was clearly designed desktop-first. Menus, forms and content blocks were cramped and hard to tap on small screens.

DESIGN PHILOSOPHY

Five principles that shaped every decision.

Before a single line of code was written, we set five principles that would guide every design choice — from typography to micro-interactions. Together, they form the philosophy that took Navkis from "functional" to "premium."

01

Less text, more imagery

Visual storytelling over paragraphs. Campus photos, lab imagery and student moments take centre stage; text supports, not dominates.

02

Dedicated pages, not dumps

Each topic gets its own page with a focused CTA. The user never feels lost in a single endless scroll again.

03

Marketing-first hierarchy

Every page leads with the value proposition, supports with evidence, and ends with a clear next step — the classic conversion arc.

04

Modern, premium typography

Sora for display headings, Inter for body — a geometric, contemporary pairing that signals quality without being trendy.

05

Motion with purpose

3D tilt cards, parallax heroes, animated counters and smooth page transitions — every animation guides attention, not decorates.

06

Mobile-first, always

Designed for the smallest screen first, then enhanced for desktop. Touch targets, drawer menus and breakpoints are all deliberate.

Same brand colours, **elevated system.**

The original site already had a recognisable palette — deep navy, brand blue and amber. We kept those colours intact (as requested) but expanded them into a complete design system with a clear hierarchy: navy for sophistication and depth, brand blue for primary actions, amber for high-impact CTAs and accents, and a soft cream for backgrounds. The palette is now used consistently across every component.

For typography, we paired **Sora** — a geometric, contemporary sans-serif — for all display headings, with **Inter** for body copy. Sora's wide, confident letterforms signal premium quality and modernity, while Inter's exceptional readability keeps longer descriptions comfortable at every screen size.

JetBrains Mono handles technical accents like stats and codes.

DESIGN DECISION

"Premium" is not about more colour or more effects — it's about restraint, hierarchy and intentionality. We chose two type families, six colours, and one accent motion language — and used them relentlessly.

INFORMATION ARCHITECTURE

A structure that **matches the user's intent.**

The biggest structural change is the move from a single homepage dump to a **seven-section architecture** with dedicated sub-pages. Each top-level section maps to a clear user intent — from "who is Navkis?" to "how do I apply?" — so users never have to scroll past irrelevant content to find what they need.

Home Hero, stats, programs preview, why-Navkis, placements, testimonials, CTA	About Overview, vision & mission, leadership, governing council, accreditation	Academics All departments + dedicated detail page per program
Admissions Process, eligibility, scholarships, online application form	Campus Life Overview, facilities, clubs & activities, gallery	Placements Training, records, recruiters, testimonials
Contact Form, contact info, embedded map, quick links	Apply Dedicated application page with multi-step support	Careers Open roles + application form for prospective staff

Crucially, every page ends with a **contextual CTA**. A user reading about Computer Science can apply directly from that department page. A user browsing campus life can schedule a visit. A user looking at placements can partner with the placement cell. The site no longer asks users to figure out the next step — it tells them.

KEY UX IMPROVEMENTS

Before vs. after — the difference is clear.

BEFORE · ORIGINAL

- Single long homepage with everything dumped together
- Default Bootstrap menu with no clear hierarchy
- Buried "Apply Now" links, inconsistent CTAs
- Heavy text blocks, very few images
- Desktop-first design that cramped on mobile
- No clear conversion path for prospective students
- Dated template visual style

AFTER · REDESIGNED

- Seven dedicated sections, each with focused content
- Sticky header with mega-menu and mobile drawer
- Contextual CTAs on every page — Apply, Enquire, Call
- Image-led storytelling, less text where possible
- Mobile-first design that scales beautifully to desktop
- Marketing-first hierarchy on every page
- Premium typography, 3D motion, modern components

Beyond the structural shift, the redesigned site introduces several premium UX features that did not exist before:

A

3D tilt cards

Program and facility cards respond to mouse movement with a smooth 3D tilt and glare effect — adding tactile depth without distracting from content.

B

Animated counters

Key stats (years of excellence, acres, programs, placement %) count up smoothly when scrolled into view — making the institution's scale feel tangible.

C

Parallax hero

The home hero has depth — multiple floating orbs, a rotating ring decoration, and parallax movement on scroll create a sense of entering a real campus.

D

Smooth page transitions

Each route change fades and slides in cleanly, scrolling to top automatically — so navigation always feels intentional and polished.

E

Mega menu navigation

Desktop users get a rich mega-menu with descriptions for each sub-page; mobile users get a full-height drawer with collapsible sections.

F

Working forms

Apply, Contact and Careers forms all validate input, show success states, and are ready to wire to any backend or email service.

MOBILE EXPERIENCE

Designed mobile-first — on every screen.

More than 70% of prospective students and parents will visit the site from a phone. The redesign treats mobile as the primary experience, not an afterthought. Every layout uses a mobile-first grid that scales gracefully to tablet and desktop, with breakpoints that adjust typography, spacing and grid density at the right moments.

The mobile navigation uses a full-height drawer with collapsible sections — so users can drill into "Academics → CSE" without ever leaving the menu. Touch targets are sized to the recommended **44px** minimum. The hero, stats bar, program cards and CTAs all stack and reflow naturally. The Apply form, contact form and gallery lightbox are all optimised for one-handed use.

MARKETING-FOCUSED DECISIONS

Built to convert, not just inform.

The original site read like an internal document — listing committees and approvals without explaining why they should matter to a prospective student. The redesign reframes every page around the visitor's question: "Is Navkis the right place for me?" That shift shows up in five concrete decisions.

01 Lead with the value proposition

Every hero — Home, Department, Admissions, Placements — opens with a clear, emotionally resonant promise. "Contemporary Higher Learning at Navkis." "Code the future." "Your engineering journey starts here."

02 Evidence before claims

Stats, recruiter logos, testimonials and accreditation badges are surfaced early — not buried in a footer. Numbers like 95%+ placements and 12-acre campus build trust fast.

03 Multiple conversion paths

Apply Now, Schedule a Visit, Talk to Admissions, Partner With Us, Enquire — each user intent has a matching CTA, and each appears in contextually relevant places.

04 Frictionless application

A dedicated Apply page with a clean, single-screen form, success state, and a "what happens next" sidebar that sets clear expectations.

05 Recruiter partnership CTA

A dedicated "Become a Recruiter" path turns the placements page from a one-way brag into a two-way business development channel.

MARKETING PRINCIPLE

A college website is not a brochure — it's a 24/7 admissions counsellor. Every page should answer a question, build trust, and invite the next step.

TECHNICAL FOUNDATION

Modern, fast, **built to last.**

The site is built on **Next.js 16** with the **App Router**, **TypeScript** for type safety, **Tailwind CSS 4** for styling, and **Framer Motion** for animations. The **shadcn/ui** component library gives a solid, accessible base for forms, dialogs and interactive primitives. All brand tokens are codified as CSS custom properties so the design system can be extended without drift.

A lightweight hash-based SPA router powers navigation between the seven sections and their sub-pages — giving the multi-page feel the user requested while keeping the bundle lean and the route transitions instant. Images are loaded lazily with native browser hints. Fonts use `display: swap` for fast first paint. The whole experience is fully responsive, accessible (semantic HTML, ARIA labels, keyboard-navigable), and SEO-optimised with proper meta tags, OpenGraph data and descriptive titles.

A website that finally matches the institution.

Navkis College of Engineering has always been more than its previous website suggested — a 16-year-old, AICTE-approved, VTU-affiliated institution with a beautiful 12-acre campus, eight academic programs, modern labs and a strong placement track record. The redesigned website finally tells that story with the clarity, confidence and visual quality the institution deserves.

Prospective students and parents can now understand the value proposition in seconds, explore programs in depth, see the campus visually, and take the next step — whether that is applying, scheduling a visit or talking to admissions — without friction. Recruiters can partner directly. Faculty can apply for open roles. Alumni can reconnect. Every audience has a clear, premium-feeling path.

In short, the redesign transforms the website from a passive information dump into an active, marketing-driven, conversion-focused experience — one that reflects the true calibre of Navkis College of Engineering, Hassan.

CLOSING

The site is just the beginning.

A premium website sets the tone for every conversation that follows — with students, parents, recruiters and partners. This redesign gives Navkis a digital front door worthy of its legacy.
